- David Roberts
- Jonathan Quigg

Beyond Facebook and Twitter...

It's not about the sites, it's about the techniques...

Introduction

- Who Are We?
 - Our Premise

1. Infrastructure
2. Using Social Networking Technologies Against Bad Actors
3. Thoughts for the Future

Who Are We?

David Keener

GENERAL DYNAMICS
Advanced Information Systems

David Roberts

GENERAL DYNAMICS
Advanced Information Systems

Jonathan Quigg

DATA TACTICS
CORPORATION

We're engineers,
web experts,
and data manipulators

Our Premise

The Cyber Security Community can achieve major benefits from a widely used “**Indicators Sharing Platform**”...

- That facilitates knowledge sharing
- That leverages social networking techniques to deliver synergistic effects

Social Networking Techniques Like...

- Crowd-Sourcing
 - Leveraging community expertise
- Reputation Ranking
 - Highlighting the most useful analysis
- Predictive Recommendations
 - Showing you what you need to know
- Increased Information Dissemination
 - Sharing info the community already has

We Can Design the System...

Right in front of you...

Right now...

Part 1. Infrastructure

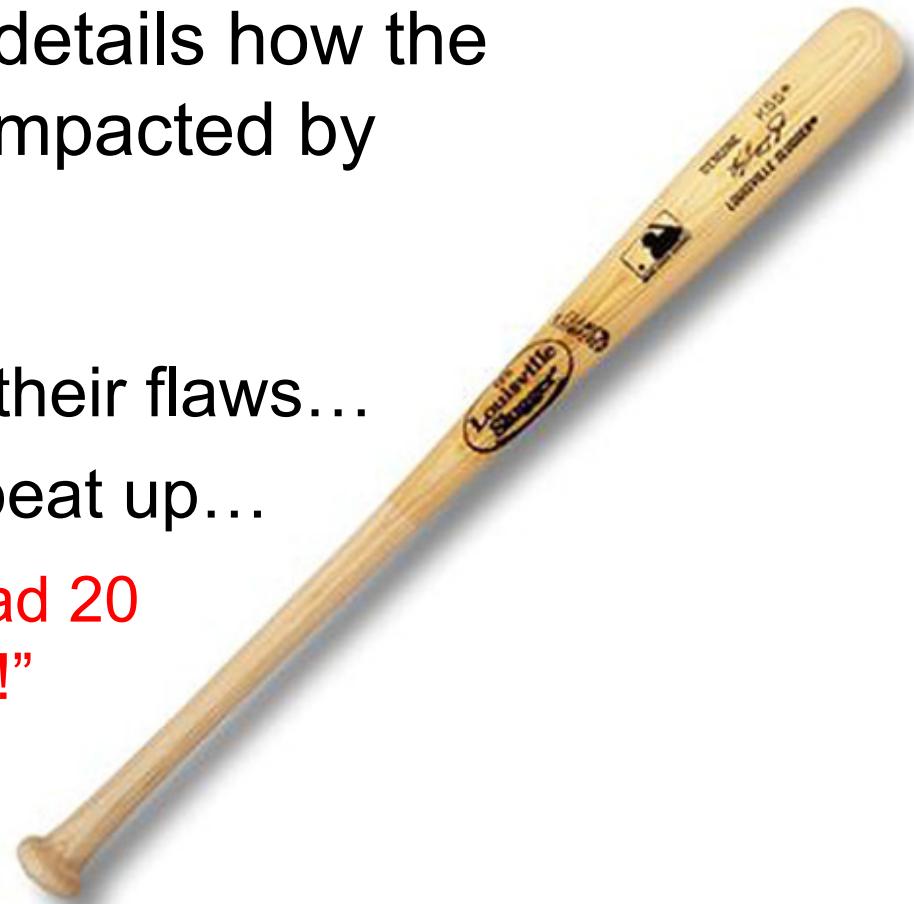

Our Baseline Needs To...

- Facilitate knowledge sharing
- Solidify our terminology
- Support critical security features

The Problem with Knowledge Sharing

Incident – A report that details how the reporter was adversely impacted by malware.

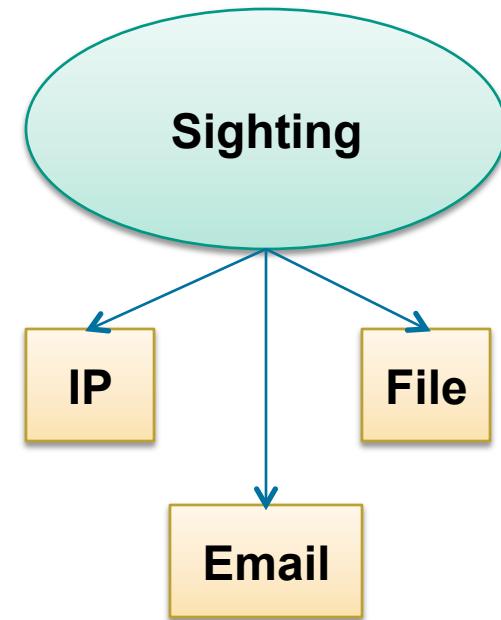

- Nobody likes to show their flaws...
- Nobody wants to get beat up...
 - “Your organization had 20 incidents last month!”

So, we need a new term...

Terminology

- **Indicator** – An object that potentially indicates the presence of malware: Ex. – Files, Emails, IP Addresses, Domain Names, etc.
- **Sighting** – A group of indicators believed to be closely related

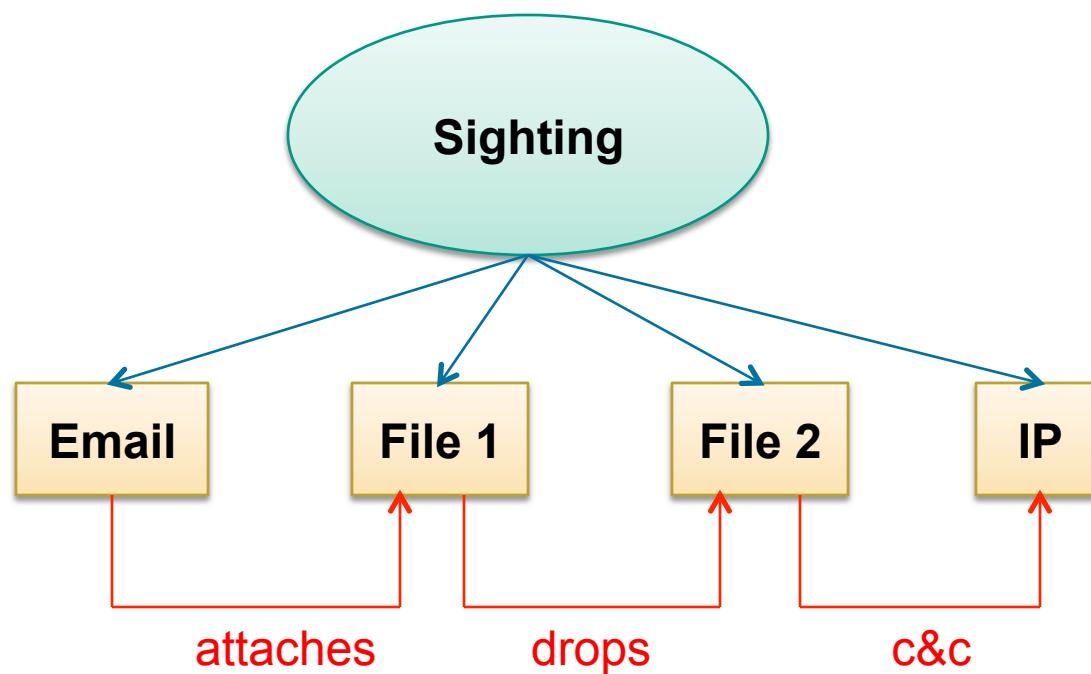

Sightings vs. Incidents

An Incident is certainly a Sighting,
but a Sighting is not necessarily
an Incident!

Relationships

A relationship describes how two indicators are related to each other.

Security Infrastructure

- Authentication
- Roles
- Access Control
- Dissemination Guidance

Plus, behind the scenes...

- SSL
- Network Security
- Auditing

Roles: What Can I Do?

- What features do I have available to me?
- Can I view objects?
- Can I create or edit objects?
- Can I delete objects?
- Can I perform searches?
- Can I see metrics?
- Can I create user accounts?

Access Control: What Can I See?

- Indicators
 - Can be “published” to one or more communities
- Users
 - Can belong to one or more communities
 - Can see an indicator if it’s published to a community that a user belongs to
- Sightings
 - Sightings inherit the communities of their indicators
 - If you can see an indicator, you can see the sighting

What Can I Do With What I Can See?

Is there an official designation?

- FOUO/SBU
- Classified/Unclassified

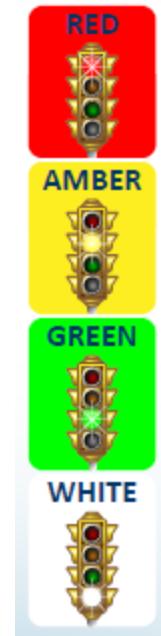

Is there any other guidance?

- Traffic Light Protocol

Traffic Light Protocol

- Red
 - Can only be shared with involved parties
- Amber
 - Own org. need to know; and only as far as needed to take necessary actions
- Green
 - Peers & partner orgs in sector, but not public
- White
 - Public

From US-CERT: <http://www.us-cert.gov/tlp/>

Optional Anonymity

- The system needs to know who users are
- The system needs to know organizations
- Optionally, users could have “handles”
 - Ex: “cyberspy01”
- Optionally, orgs could have generic descriptions
 - Ex: “Government Agency”

Our Starting Point

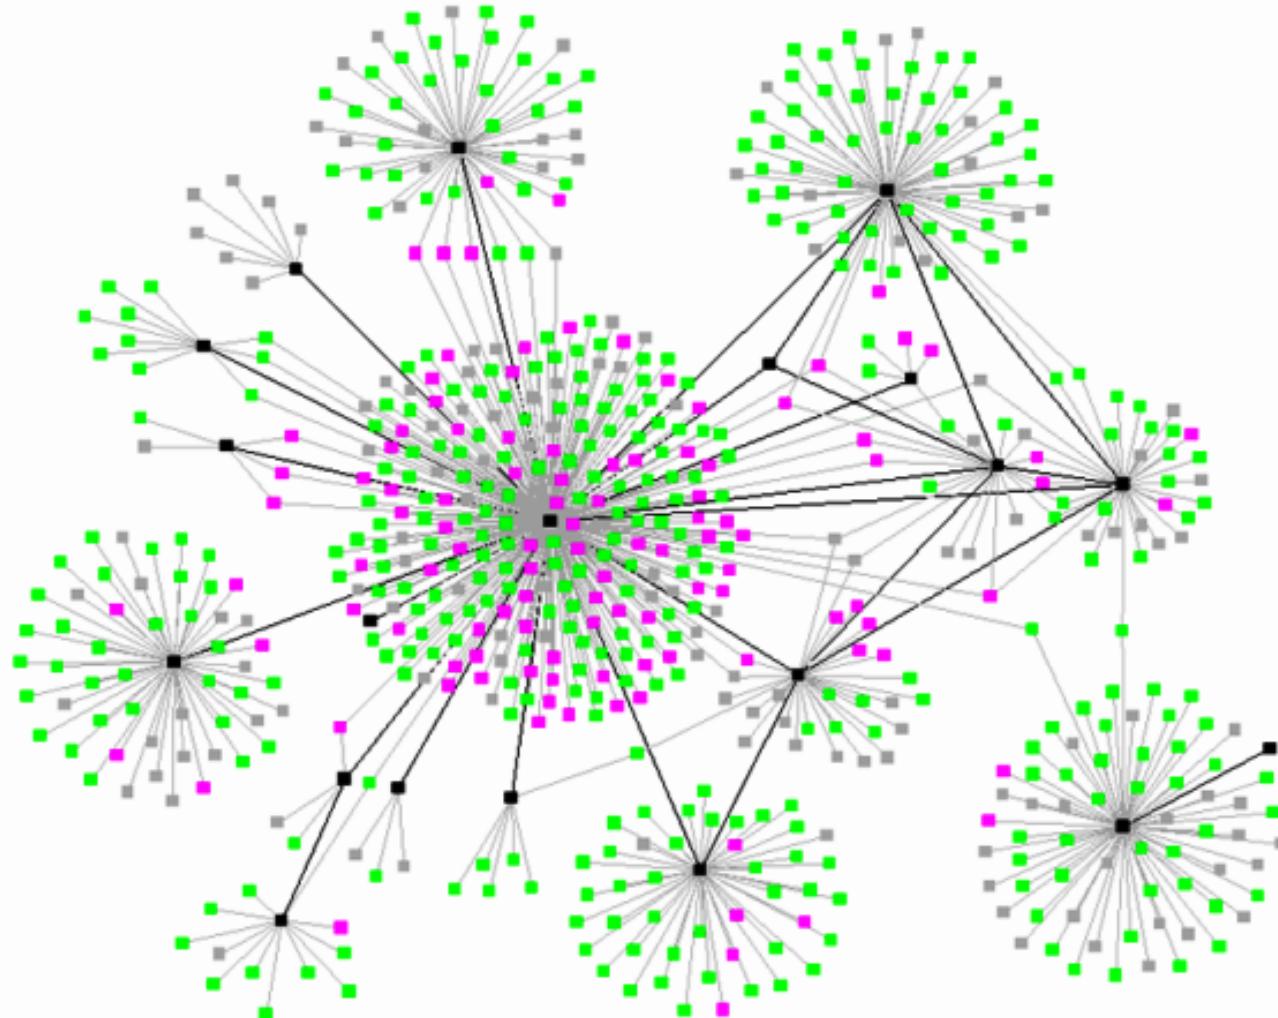

- A system that can store sightings, indicators and relationships
- Users with well-defined roles
- Fine-grained access control

We Have Done This...

- We've built a system like this
- We have the experience

Now, we're going to take it to the next level

Part 2: Using Social Networking Techniques

Leveraging the Community

- Make the system widely available
- Allow users to enter sightings/indicators
- Allow users to comment on sightings/indicators

Before We Go Further...

Let's explore interactivity in a really simple
“community” that we're all familiar with...

The Couch Potato Community

You might think that TV is a non-interactive medium

- The TV plays...
- You watch...
- No real interactivity

Except for the Remote

Television Exists to Sell a Product

- We are the product
- Advertisers are the customers

(Alert: Product Substitution Detected)

Even the very limited activity of TV viewers provides great value...

Web Apps Facilitate Interactivity

- Can support interactivity in many ways
- Can generate a lot of valuable info

Let's think about the **impact of interactivity**
on our app

Mining the Content

- Some indicators and sightings will be useful
 - Some not so useful
- Some comments will be good
 - Some will be bad

Grain and Chaff

Let the community evaluate them

Voting

- Up Vote: Useful & Relevant
- Down Vote: Not Useful

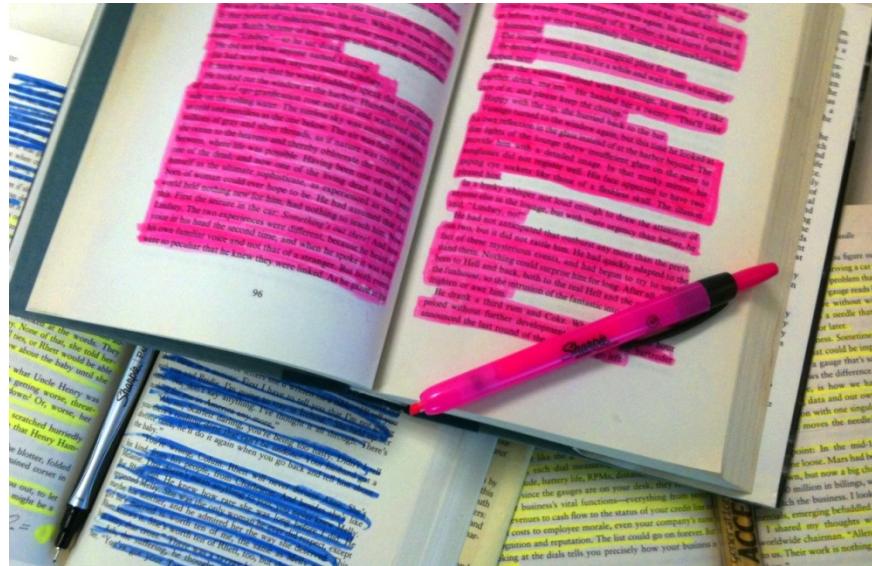

The screenshot shows a Stack Overflow question page. At the top, the Stack Overflow logo is visible, followed by a navigation bar with links for Questions, Tags, Users, Badges, and Unanswered. The main title of the question is "How to make “form_for” use “remote => true” based on condition?". Below the title, there are upvote (0) and downvote (1) arrows. A user has tried to implement the solution with the following code:

```
<%= form_for position position.new_record? ? (, :remote => true do |p| %>
```

A syntax error message follows: "syntax error...". The code is tagged with "ruby-on-rails". Below the code, there are links for "link", "edit", and "flag". The question was edited on Jul 24 '11 at 20:54. It was asked on Jul 24 '11 at 20:41 by Martin Petrov, who has 503 reputation and a 96% accept rate. There is also a link to "add comment".

Comment Relevancy Threshold

- If enough people think a comment is irrelevant
 - Hide it
- Keeps relevant data in front of the community
- Helps promote “information density”

What About Sightings & Indicators?

- Can't hide them...they are real reports
- Voting can affect relevancy
- Higher relevancies emphasized in search results
- Voting results shown throughout the app

To Summarize...

- We've let users enter Sightings & Indicators
 - And vote on them
- We've let users enter comments
 - And vote on them

We're doing a reasonably good job of evaluating content

Crowd-Sourcing

...is when all or a significant portion of your content is provided by your user community

Leveraging community-generated content is extremely powerful

It Can Be Done Well...

This is a "Pro" in every sense., March 12, 2008

By [J. Shea](#) (Boston) - [See all my reviews](#)

In March 2008, I decided it was time to upgrade from a G4-based laptop to a MacBook Pro. I was torn about whether to pay the premium for the "Pro" model. Ultimately, I decided

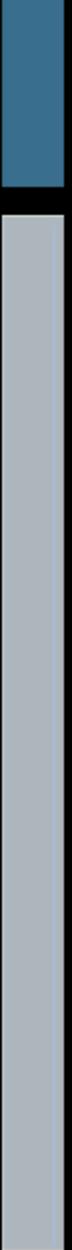

Construction quality

The aluminum case of the MacBook Pro reminds me of a product made together nearly seamlessly. The MacBook's case, however, is made from plastic and has a noticeable seam between the two wrists as I typed.

Ports

Compared with the MacBook, the MacBook Pro provides an additional two USB ports and a FireWire port. The ExpressCard slot is useful for future expansion and s

Social Networking: The Next Weapon Against Bad Actors
GFIRST8 | No Audience Restrictions

GENERAL DYNAMICS
Advanced Information Systems

Yes

Because User Activity is Tracked

Usage Patterns & Statistics

- We can highlight popular Sightings / Indicators
- We can analyze viewing trends

Can We Do More?

DK

39

Social Networking: The Next Weapon Against Bad Actors
GFIRST8 | No Audience Restrictions

GENERAL DYNAMICS
Advanced Information Systems

Yes

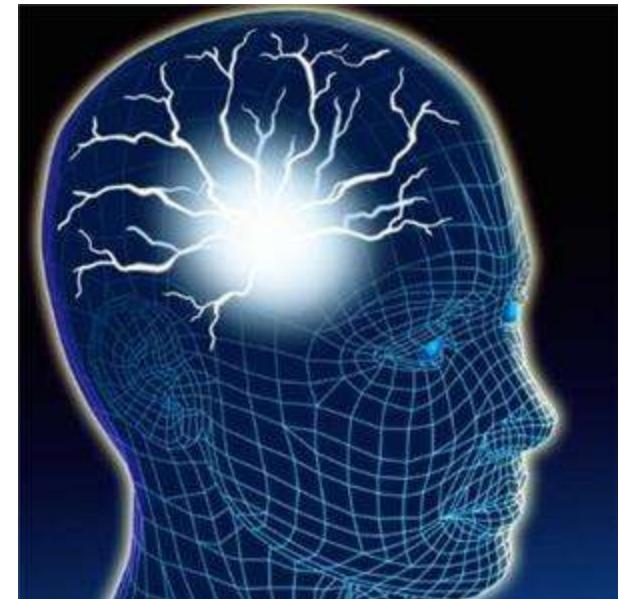

Because We Know a Lot More About Our Users

About Our Users

We know who creates:

- ...good/bad Sightings & Indicators
 - As rated by the community
- ...good/bad comments
 - As rated by the community

We know who likes:

- ...good/bad comments
 - As rated by the community

High Quality Users

- We can identify “High Quality Users”

Shouldn't a user...

...who consistently likes good data elements
carry more weight
than someone who consistently does not?

The End Effect

- Identify the best analysis at any given time
 - Keeps content value high
 - Minimizes distractions
- Emphasize contributions of High Quality Users
 - 80% of value from 20% of users
 - Make contributing worth the effort

Supporting Features

- Should have user profiles
- Should be able to follow another user's activities
 - The Sightings / Indicators they have entered
 - The comments they have entered
 - Their Up votes
- Reputation
 - A user's “reputation” should matter to them...
 - It should be visible anywhere they're listed

Leveraging High Quality Users

Acknowledge activities that benefit community...

- Highlight “High Quality Users”
 - Visible display of their reputation
- Provide rewards for beneficial activities
 - Increased reputation (such as points)
 - Badges to highlight notable activities
 - Rank (as a potential credential)
- Encourage good activities

This Is “Reputation Ranking”

- Calculating user reputation based on community-related activities
- Leveraging reputation to highlight good content
- Using reputation to encourage a community to achieve the highest performance level

Pie In the Sky

Stack Overflow

The screenshot shows the Stack Overflow 'Users' page. At the top, there's a navigation bar with links for Questions, Tags, Users (highlighted in orange), Badges, and Unanswered, along with an 'Ask Question' button. Below the navigation is a search bar labeled 'reputation' with dropdown options for new users, voters, and editors. There are also buttons for filtering by time: week, month (selected), quarter, year, and all. A search input field is present with placeholder text 'Type to find users:'. Below the search bar, four user profiles are displayed in a grid:

- Darin Dimitrov: Rouen, France, reputation 8,870, interests: asp.net-mvc-3, asp.net-mvc, c#.
- Jon Skeet: Reading, United Kingdom, reputation 7,131, interests: c#, java, .net.
- JB Nizet: Saint-Etienne, France, reputation 6,599, interests: java, hibernate, multithreading.
- dasblinkenlight: United States, reputation 6,510, interests: c#, c++, c.

The screenshot shows the Stack Overflow 'Badges' page. At the top, there's a navigation bar with links for Questions, Tags, Users, Badges (highlighted in orange), and Unanswered, along with an 'Ask Question' button. Below the navigation is a 'Legend' section with two entries:

- Gold Badge**: Described as rare and requiring active work toward accomplishment.
- Silver Badge**: Described as attainable if interested.

Below the legend, a section titled 'As you use Stack Overflow to ask and answer questions, you'll earn badges, which appear on your user page and in your user card.' lists several badge categories with their descriptions:

- Altruist × 1792: First bounty you manually awarded on another person's question.
- Analytical × 23467: Visited every section of the FAQ.
- Announcer × 9094: Shared a link to a question that was visited by 25 unique IP addresses.
- Archaeologist × 219: Edited 100 posts that were inactive for 6 months.
- Autobiographer × 70605: Completed all user profile fields.

The Value of This Approach

- User-generated content
- User-rated content
- Well publicized reputation scores
- Rewards: User can earn extra privileges
- Badges: For ongoing encouragement

Amazon – Top Reviewers

Social Networking: The Next Weapon Against Bad Actors
GFIRST8 | No Audience Restrictions

GENERAL DYNAMICS
Advanced Information Systems 3

A Recommendation Engine

- We know you like a particular Sighting
- Other people who like that Sighting ALSO like this other Sighting over here
- We can recommend things you might be interested in

Summary

The Indicators Sharing Platform uses:

- Crowd-Sourcing
 - To leverage community expertise
- Reputation Ranking
 - To highlight the most useful information
- Predictive Recommendations
 - To show you what you need to know
- Increased Information Dissemination
 - To help share what the community already knows

Part 3: Thoughts for the Future

DK

54
Social Networking: The Next Weapon Against Bad Actors
GFIRST8 | No Audience Restrictions

GENERAL DYNAMICS
Advanced Information Systems

Open Playing Field

New technologies bring new vulnerabilities that will be exploited by Bad Actors

- Increased use of Virtual Reality, e.g. – Second Life
- Augmented Reality
- New Devices – Smartphones, tablets, etc.

We need better ways to fight the Bad Actors

Collaboration Is Key

- Social Networking is about collaboration
 - It can be purely social like Facebook
 - But it can be harnessed for a real purpose
 - **Amazon:** High-quality product reviews
 - **Stack Overflow:** Real answers to real technical problems by real experts
 - **Indicators Sharing Platform:** Fighting the bad guys

Social Networking Techniques

...Can provide real benefits

- Crowd-Sourcing
 - To leverage community expertise
- Reputation Ranking
 - To highlight the most useful information
- Predictive Recommendations
 - To show you what you need to know
- Increased Information Dissemination
 - To help share what the community already knows

Social Networking Techniques

We've shown the benefits of...

- Crowd-Sourcing
- Reputation Ranking
- Predictive Recommendations
- Increased Information Dissemination

Combined, we have a Feedback Loop that can increase community effectiveness

Conclusion

The Bad Actors are getting more sophisticated.

Let's Harness the Cyber Security Community
And Hone It
Into an Even More Effective Weapon
Against Bad Actors
